

Manual	Environmental Management Manual		
Title	Genesis Energy Environmental Values		
Document ID	GEN-ENV-POL-00006	Revision No:	1

We are committed to achieving excellence in all our environmental practices and to ensuring that environmental and social awareness are the cornerstones of our business. Achieving full regulatory compliance is considered the minimum standard that Genesis Energy must strive to achieve in the operation of its business.

At Genesis Energy we:

Act with integrity at all times

- We are committed to having relationships that are based on trust and mutual respect.*

Foster close relationships with the community and stakeholders, so that their views can be incorporated into the environmental decision-making processes.

- We are available, approachable and willing to talk to and listen to anyone who wants to talk. Continuing an open dialogue is an important part of building and strengthening relationships.*

Acknowledge that our activities affect both the environment and the communities within which we operate.

- Environmental effects are an inevitable part of operating power schemes. We work closely with stakeholders to identify innovative ways to mitigate these effects.*

Respect the role of tangata whenua as kaitiaki of the natural resources and taonga within their rohe.

- Our operations are located within the rohe of various iwi and hapu. We facilitate effective dialogue to seek a better understanding of the effects of our activities on tangata whenua, and to assist them to exercise kaitiakitanga.*

Investigate to better understand the nature of the environmental effects – and share this information with the community and stakeholders.

- Good environmental management is a two-way process and Genesis Energy acknowledges there is much to learn from others. To be credible, any information collected must be independent and robust. It must have buy-in and input from all those affected.*

Seek environmental improvements in all aspects of our business.

- We monitor performance to be able to assess environmental effects over the long term. We also seek energy efficiency enhancements and waste reduction opportunities across our business. Environmental management systems and operations are continuously reviewed to look for opportunities to improve them. We welcome public input and appreciate feedback*
